

Hashgraph based Universal Identity Solution

EarthID is a Universal Identity solution built on Hashgraph technology, that overcomes the problems with the existing Identity Management Systems. EarthID aims at reducing the cost of maintaining User Identity using a global decentralised platform. It reduces the risks of Identity Thefts and associated Frauds, through power of Cryptography. It provides a borderless identity platform, thereby simplifying the ID validation process and eliminating the need of carrying multiple IDs.

Trust Score

Trust Score is a proprietary Identity Scoring mechanism, which empowers the organisations to take decisions and provide services in a graded manner. A trust score will determine the strength of a user's identity, which helps various institutions to take decisions such as granting a loan, renting a car, and various other services. It is essential for a user to maintain a higher trust score, to access online and offline services in a more seamless way.

For Individuals:

-  Individuals will be in control of their own identity information.
-  Users will be able to use EarthID across the globe in a borderless way.
-  Single ID for all purposes.

For Industries:

-  EarthID will simplify the ID verification process, thereby reducing associated hassle and cost for the organisations.
-  Government and regulatory bodies can verify user's identity in a cost effective and secured way.
-  Ecommerce platforms can prevent frauds through trust scoring their users and vendors.

ERT Token

ERT is a utility token allowing organizations to access an individual's identity details for their own ID verification processes. The individual users are also incentivised using ERT token to maintain and share their ID information. Since EarthID will be built on Hashgraph technology, the transactions made using ERT tokens will be much more secured and faster. By reducing the cost incurred in the verification process, ERT, in turn, will benefit organizations and industries.

Token distribution

-  70% tokens for public distribution through Crowd Sale.
-  15% tokens for partners on-boarding, Bounty, Airdrop etc.
-  15% tokens for team.

Token sale

	Token Supply	Worth (\$)	Raise (\$)
Private Sale 25 Apr - 24 May 50% Bonus	18.75 M	3.75 M	\$2.5 M
Pre-ICO 24 May - 24 Jun 30% Bonus	32.5 M	6.5 M	\$5 M
CrowdSale 25 Jun - 25 Aug 15% Bonus 7 days X 11 cycles	129 M	25.8 M	\$22.5 M
Total	180.25 M	36.05 M	\$30 M

Roadmap

- October 2017
Initiated Earth ID
- December 2017
Idea Validation
- April 2018
Private Sale
- April 2018
Launch of Alpha Applications
- May 2018
Users Onboarding Starts
- May 2018
Pre-Crowd Sale
- June 2018
Crowd Sale
- September 2018
Release of Beta Application
- March 2019
Developer SDK and Partner APIs
- May 2019
Developer SDK PARTner APIs
